

Movie Dashboard Management System (Week 4 Submission)

This project is an extension of the Week 3 Admin Dashboard.

It includes Movie Management CRUD, Pagination, Filters, Validations, Context API usage, and UI consistency improvements.

Features Implemented:

1. Add Movie – form, validation, notifications, Context API storage
2. Edit Movie – prefilled form, update movie details, success notification
3. Movies List Page – search filter, pagination, edit buttons
4. Global State – Context API for movie list
5. Dashboard Features – sidebar, topbar, dark mode, chart, calendar, kanban board, users, tickets

Project Structure:

src/components, src/context, src/pages (MoviesPage.js, AddMovie.js, EditMovie.js, etc.)

How to Run:

npm install

npm start

Open <http://localhost:3000>

Routes:

/movies – list all movies

/movies/add – add movie

/movies/edit/:id – edit movie

/calendar, /kanban, /tickets, /users

Dark Mode supported.

Validation and notifications included.

Clean UI using TailwindCSS.
